„All of you are pioneers in a completely new, disruptive economic field that will undoubtedly come to flourish. Our community is the breeding ground, the nurturing womb for the first, true decentralized society and economy. Most of the crypto sector is nothing but unsubstantiated hype, a melting pot of impractical ideas fueled by psychologically manipulative marketing, greed, and deceit. Like it or not, this is the reality of not just crypto but the majority of capitalism at a whole. P3D is the complete opposite of all of that. We offer a complete product right from the bat with utter honesty and transparency. And THAT is the standard for all our releases. No lies. No hype. No waiting. No bullshit. We will disrupt the entire decentralized software and economy sector with what we have in store. Mark my words.“

- mantso (lead dev, project lead)

POWH

A decentralized economic simulation of an algorithmically governed cryptocurrency in which the taxes on all transactions are awarded autonomously to currency owners instead of a governing body; resulting in a universal passive income based on adoption and transaction volume.

PoWH3D is a fiction-made-real blockchain enforced simulation of self-removal from pareto optimality; an economic concept in which there is no longer a way for an allocation of resources to improve without harming a participant of the model. In this case the harm is intentionally self-imposed due to a lack of patience against other opponents, or as an entry fee to start playing the game.

The result of this experiment in human temperamentality is a mutually beneficial agreement for all other participants in the model based on the decision of others to break Pareto optimality by entering or leaving the contract. The most uniquely expressed benefit is in the form of passive-Ethereum income generated by fees imposed on other players liquidating their positions into, or out of the game. These fees are distributed to token holders as a form of share-based return. The resulting volume-based income adds an expressive third dimension to the standard price/time calculations that are ubiquitous in cryptocurrency today.

## The Three Dimensions of PoWH3D

The dimensions of transaction volume over time are critical. You have to think in months, not days. It's important to analyze the right things when evaluating PoWH3D:

- **Trading volume** is the number of transactions on the exchange and this governs the rewards generated each day.
- **Token value** in ETH which is determined by buys and sells which very incrementally raise or lower the buy and sell price of the token.
- **Time.** Remember that rewards are generated here for as long as there is volume and volatility until the Ethereum network disappears.

## What is PoWH3D?

PoWH3D is a unique cryptocurrency exchange which allows you to trade Ethereum for P3D tokens. P3D tokens are ERC-20 tokens with a clever twist: Every P3D holder receives direct earnings in Ethereum every time that anyone else buys, sells or trades the token based on the amounts of tokens (in % out of total amount minted) held.

This means that as soon as you hold P3D tokens, you are continuously accumulating „free“ Ethereum distributed to you on every transaction based on the amount of P3D tokens you hold on the exchange! This exchange and token are made better by the fact that the entire system is powered by an open-source Ethereum smart contract ensuring transparency, security, and trust.

Every trade, buy or sell, has a 10% flat transaction fee applied. Instead of this going to the exchange, the fee is split between all currently held tokens! 10% of all volume this cryptocurrency ever experiences, is set aside for you, the token holders, as Ethereum rewards that you can reinvest or instantly withdraw whenever you'd like.

# POWH

## Dezentralized Exchange

The core functionality of the PoWH3D exchange is entirely powered only by a deployed open-source Ethereum smart contract. Smart contracts are immutable and this means there is no one who has access to these funds but this autonomous program. You can see the full source code for the contract managing this exchange at any time.

MAIN EXCHANGE

**exchange.powh3d.io**

Chrome Browser required

MetaMask required

Masternode data available

When you are buying or selling on the exchange, you are buying or selling directly from the PoWH3D smart contract, not other users. The PoWH3D smart contract is solely responsible for issuing tokens and increasing supply as well as burning tokens and reducing supply. This happens automatically on all buys and sells to the exchange. In addition, the smart contract is solely responsible for determining the value of the P3D token as well.

## How Does it Work?

The rules of this token are simple yet also brilliant.

**Buy Tokens.** Buy P3D tokens, and 10% of your transaction is used to pay earnings to other users.

**Accumulate Earnings.** Accumulate Ethereum earnings as other users buy, sell, or transfer P3D.

**Reinvest or Withdraw.** Reinvest or withdraw your Ethereum earnings as they accumulate.

**Sell Tokens or Don't! Sell** your tokens at any time to receive Ethereum back from the exchange.

**Share your Masternode.** If you buy enough tokens for a masternode, share your masternode link to get bonus earnings!

**Have Fun!** Have fun watching as your earnings and token value fluctuate over time!

POWH

## You want to participate in PoWH3D

### ETHEREUM EARNINGS

Holding onto P3D tokens means you are continuously being distributed „free“ Ethereum every single time any other user of the exchange buys, sells or transfers P3D tokens. Many holders often report earnings between 0.05% - 2% of their holdings on a daily basis, though this fluctuates heavily based on transaction volume.

### FAIR

There was no pre-mine for P3D. Developers and contributors purchased small amounts (1 ETH each) with no additional pre-mine of coins. The distribution of tokens is incredibly even. Everyone had the same chance to buy-in and everyone gets earnings only according to their P3D holdings. There is no developer fee.

### FRAUD-PROOF

The Ethereum you enter into the system isn't being held by any person or group. The Ethereum in the exchange is handled only by a production open-source Ethereum smart contract. Contracts are immutable and this means there is no owner who could decide they wanted to keep the Ethereum for themselves.

# POWH

## **You want to participate in PoWH3D**

### **TRANSPARENT**

You can see the full source code for the contract managing this exchange. The rules of the exchange are clearly posted and no promises are being made. There is a clear culture of honesty and transparency amongst the community and above all by the admins and developers.

### **DECENTRALIZED**

The entire exchange backend is powered by the smart contract which lives on the Ethereum blockchain and is „owned“ by no one. If the site goes down, the contract can always be accessed by alternate front-ends. The contract simply operates according to rules that are fair and can't be changed.

### **ACTIVE**

There is already a large community around this project. Many users in a supportive community. Join the discord chat and use the #helpdesk if you have questions or just come in to say hello. Many people are committed to the success of this project and to helping newcomers.
